More importantly, I have been learning skills involving react, Node.js, JavaScript, and so much more web development skills in becoming a full stack web developer.

I will have a link to my own coding portfolio soon...

My recent work has been in driving/courier for Amazon and have had some training and experience with UPS, BUT i do have a certification through SoloLearn, an online training website, for Java and i have been working on getting my certification through Python and C++ as well. I have been working for a long time and have a variety of experience in the workplace but what I would say it comes down to, to describe in short summary would be: my willingness to work hard is exceptional, willing to learn and take on new challenges, and that I strive to do it all to try and provide for my wife and future family of our own.
